feedback.md 2024-03-26

# Feedback | Group 9

## Milestone 1

# Problem Definition | 20 points

The problem is defined properly, and the structure was kept, however, I would recommend to concentrate only on **Testing.** 

- Broad Area of Interest
- Preliminary Research
  - o Current trends
  - o Opportunities
- Solution with Methodology
  - Data Collection
  - Analytical Techniques
  - Implementation Plan
- Expected Outcomes
- Evaluation Metrics

Make sure to change <code>.docx</code> file to pdf. As soon as you do so, let me know and I will change the grade to 20

#### Grade: 18

### Roadmap | 10 points

The roadmap seems realistic but not user friendly.

Grade: 10

### Administrative Tasks | 5 points

- Roles are assigned
- · Preliminary discussion with me was done
- · Slack channel is create
- · Github Repo is created

Grade: 5

## Technical Tasks | 5 points

- Proper <u>gitignore</u> file is available; however Python track wasn't selected
- The Requirments.txt file is available, indicating that venv was created
- The first chapter of the Package Development course is done by everyone

#### Grade: 4

### Grade

feedback.md 2024-03-26

Final Grade: 37/40

# Milestone 2 | Tasks

# Product and Project Manager | 40 points

- 1. Name your Python package: register to pypi
- 2. Install mkdocs package to start with the documentation
- 3. Database schema: Provide your product database structure (ERD)
- 4. Transform your project file structure according to the below tree

```
PythonPackageProject/ #githhub repo MarketingProject
                                     payment_optimizer
 — yourpackagename/
       -__init__.py
      submodule1/ #database related
          — __init__.py
        └─ submodule1_1.py
                                     modeling
      — submodule2/ #model related
          – __init__.py
                                      model.py
        submodule1_2.py
     └─ submodule3/ # api related
                                      api
          - __init__.py
        ___ submodule1_2.py
  - tests/
     — __init__.py
      test_module1.py
    test module2.pv
  example.ipynb # showing how it works
 — run.py # in order to run an API

    docs/ #this folder we need for documentation

| — .gitignore
 requirments.txt
  README.md

    LICENSE

  – setup.py
```

# Data Scientist and Data Analyst | 20 points

- 1. Simulate the data if you need
- 2. Try to use the CRUD functionality done by DB Developer
- 3. Work on modeling part using simple models

```
from yourpackage.submodule2 import modelname
```

feedback.md 2024-03-26

- 1. Create a DB and respective tables suggested by the Product Manager
- 2. Connect to SQL with Python
- 3. Push data from flat files to DB
- 4. Test the code provided here and complete the missing components
- 5. Add extra methods that you might need throughout the project:
  - 1. Communicate with PM and API Developer for custom functionality

from yourpackage.submodule1 import sqlinteractions

# API Developer | 30 points

- 1. Communicate with DB Developer and PM in order to design the API
- 2. You can create dummy endpoints in the beginning, then communicate with PM as well
- 3. The following endpoints must be available:
  - 1. GET
  - 2. POST
  - 3. UPDATE

Check out this this repo.

from yourpackage.submodule2 import api
