feedback.md 2024-03-26

Feedback | Group 4

Milestone 1

Problem Definition | 20 points

The problem is defined properly, and the structure was kept, however, I would recommend to concentrate only on **Testing.**

- Broad Area of Interest
- Preliminary Research
 - o Current trends
 - o Opportunities
- Solution with Methodology
 - Data Collection
 - Analytical Techniques
 - Implementation Plan
- Expected Outcomes
- Evaluation Metrics

Make sure to change <code>.docx</code> file to pdf. As soon as you do so, let me know and I will change the grade to 20

Grade: 18

Roadmap | 10 points

The roadmap seems realistic but not user friendly.

Grade: 10

Administrative Tasks | 5 points

- Roles are assigned
- · Preliminary discussion with me was done
- · Slack channel is create
- · Github Repo is created

Grade: 5

Technical Tasks | 5 points

- Proper <u>gitignore</u> file is available; however Python track wasn't selected
- The Requirments.txt file is available, indicating that venv was created
- The first chapter of the Package Development course is done by everyone

Grade: 4

Grade

feedback.md 2024-03-26

Final Grade: 37/40

Milestone 2 | Tasks

Fix the problem statement from the first milestone.

Prudoct and Project Manager | 40 points

- 1. Name your Python package: register to pypi
- 2. Install mkdocs package to start with the documentation
- 3. Database schema: Provide your product database structure (ERD)
- 4. Transform your project file structure according to the below tree

```
PythonPackageProject/ #githhub repo
  - yourpackagename/
      — __init__.py

    submodule1/ #database related

           - __init__.py
        ___ submodule1_1.py
    └─ submodule2/ #model related
         — __init__.py

    submodule1_2.py

     └─ submodule3/ # api related
          — __init__.py
           - submodule1_2.py
  - tests/
     — __init__.py
       test_module1.py
      — test_module2.py
 — example.ipynb # showing how it works
 — run.py # in order to run an API
 — docs/ #this folder we need for documentation
 gitignore
| — requirments.txt
  README.md

    LICENSE

 — setup.py
```

Data Scientist and Data Analyst | 20 points

- 1. Simulate the data if you need
- 2. Try to use the CRUD functionality done by DB Developer
- 3. Work on modeling part using simple models

```
from yourpackage.submodule2 import modelname
```

feedback.md 2024-03-26

Database Developer | 30 points

- 1. Create a DB and respective tables suggested by the Product Manager
- 2. Connect to SQL with Python
- 3. Push data from flat files to DB
- 4. Test the code provided here and complete the missing components
- 5. Add extra methods that you might need throughout the project:
 - 1. Communicate with PM and API Developer for custom functionality

from yourpackage.submodule1 import sqlinteractions

API Developer | 30 points

- 1. Communicate with DB Developer and PM in order to design the API
- 2. You can create dummy endpoints in the beginning, then communicate with PM as well
- 3. The following endpoints must be available:
 - 1. GET
 - 2. POST
 - 3. UPDATE

Check out this this repo.

from yourpackage.submodule2 import api
